En-ROADS Climate Workshop

Hiske Overweg (WUR)

During the workshop, we will collectively explore climate solutions and visualize their impact in real-time, using the En-ROADS Climate Solutions Simulator, a user-friendly climate model. We will use En-ROADS to explore the impacts of solutions across several sectors - from carbon pricing, to energy efficiency, to innovations in new technology and discuss how to create equitable transformation. To build confidence in the En-ROADS model we will address its calibration against integrated assessment models.
